

# sensART VMAC

**sensART VMAC**  
voltage measurement adapter.

## APPLICATIONS

- > The **sensART VMAC** voltage measurement adapter allows the use of Low Power Voltage Transformers (LPVT) with conventional IEDs.

## MAIN FEATURES

- > The main feature of the voltage measurement adapter is to copy the analogical signal received from the voltage sensor, amplified up to a value of  $100/\sqrt{3}$  V,  $110/\sqrt{3}$  V,  $120/\sqrt{3}$  V, a signal that can supply the voltage inputs of devices with conventional protection, with signals similar to those that would be delivered by a secondary voltage transformer.
- > Small size.
- > Adapts sensor signal to analog input of conventional protection.
